EXPERIENCE

1. DATA ANALYST at OPK-E-SERVICES [Mar 2023 - Present]

- Performed in-depth **Root Cause Analysis** on email marketing performance metrics — analyzing over 100+ campaigns and optimizing open rates, click-through rates (CTR), and conversion rates (CR) using **Python, SQL** queries and **Excel**.
- Supported the US Gmail Team by **interpreting data and analyzing** 30+ campaigns & 15+ creative testing monthly. Provided actionable insights that enhanced **A/B testing** strategies using **Python**.
- Developed and automated 10+ **Tableau dashboards** for monthly MIS reporting, reducing manual reporting time and increasing reporting accuracy. Enhanced data visualization capabilities, enabling stakeholders to make quicker, data-backed decisions.
- Collaborated with marketing teams to segment and analyze audience data, optimizing email targeting strategies.
- Presented analytical findings to senior management and cross-functional teams, contributing to strategy development in overall email marketing.

ANALYTICAL SKILLS

- **Completed Udemy certification in Machine Learning A to Z using Python:** Skilled in **Logistic Regression**, **Linear Regression**, **Decision Trees** and **Random Forest**, with proficiency in **Python** (NumPy, Pandas, Matplotlib) for data manipulation, analysis and visualization.
- **Completed Udemy certification in Credit Risk Modeling (Python)**: Proficient in **Credit Risk** and **financial regulations** (IFRS 9, CCAR, CECL) with expertise in **PD**, **LGD**, and **EAD** models for calculating **ECL**. Experienced in **Exploratory Data Analysis**, developing **credit risk scorecards** and applying **model development**, **monitoring**, and **validation techniques**. LINK
- **Technical Skills**: Advanced MS Excel, SQL, Python, Statistics, Econometrics and Tableau

PROJECTS

1. Credit Risk Analysis and Scorecard Model Development:

- Developed a **credit risk model** to predict the probability of borrower default and calculate **Expected Credit Loss (ECL)**, utilizing key risk metrics such as **Probability of Default (PD)**, **Loss Given Default (LGD)**, and **Exposure at Default (EAD)**.
- Performed comprehensive **data preprocessing**, including handling missing values, outlier detection, and feature engineering, to ensure data quality and enhance model performance.
- Utilized **WOE (Weight of Evidence)** and **Information Value** techniques for **variable selection**, ensuring the inclusion of the most predictive features in the model.
- Applied **machine learning algorithms** like **Logistic Regression** and **Linear Regression** to classify credit risk, assessing model performance using evaluation metrics such as **ROC-AUC**, **Gini coefficient**, and **confusion matrix**.

2. Time-series Analysis - Stock Market Prices Prediction:

- Applied the **Box-Jenkins approach** and **ARIMA model** for forecasting stock prices.
- Assessed **stationarity** of the data using the **Augmented Dickey-Fuller (ADF) test**, **Unit Root test**, and **ACF/PACF plots**.
- Performed **Co-integration tests** and applied the **Error Correction Model (ECM)** to evaluate the adequacy of the forecasting model.

ACADEMIC QUALIFICATION

Course	University	Year of Passing	Marks
MA Economics	Jawaharlal Nehru University	2022	55.06%
B.A.(H)Economics	Miranda House, University of Delhi	2019	5.26 CGPA
12th Class	Govt. Sarvodya Kanya Vidyalya	2016	79%
10th Class	Govt. Sarvodya Kanya Vidyalya	2014	82%
