---

Professional Summary

Backend Developer & Solutions Engineer with an M.Tech in Data Science, specializing in building scalable APIs, data-driven systems, AI-powered applications, and interactive dashboards. Proficient in Python, Django REST Framework, SQL, Flutter, and Apache Superset, with hands-on expertise in integrating backend systems with mobile apps and designing client-focused solutions. Skilled in AI-Assisted Development (Vibe Coding), leveraging AI tools to rapidly prototype, validate, and deploy solutions — reducing delivery time and improving reliability.

Experience

Brigita Private Limited, Bengaluru

Backend Developer & Solutions Engineer - **Feb 2025 - Present**

- Apply Vibe Coding (AI-Assisted Development) to rapidly prototype, adapt and deliver client-focused solutions.
- Build and deploy production-grade REST APIs using Django REST Framework.
- Design and deliver end-to-end client solutions including data modules and API integrations.
- Integrate Flutter mobile apps with backend APIs to ensure real-time data sync and seamless UX.
- Deliver AI/data modules using Python (Pandas, NumPy) for product enhancements and automation.
- Built charts and dashboards using Apache Superset to enable interactive data visualization, business monitoring, and client reporting; integrated Superset with backend data pipelines for near real-time KPIs.
- Engage directly with clients for requirement gathering, troubleshooting, and solution validation.

Data Science Intern - **May 2024 - Jun 2024**

- Built ML models and pipelines for real-time image/video background removal.
- Implemented production-capable preprocessing and inference steps for CV pipelines.

Sri Lakshmi Agencies, Ranipet, TN

Operations & Business Development Assistant - **May 2019 - Jul 2023**

- Managed daily operations and optimized inventory processes.
- Used data-driven processes to improve customer retention and operational reporting.

Key Projects

- **Analytics Dashboards (Apache Superset)** — Designed interactive dashboards and custom visualizations for monitoring business KPIs and client-specific metrics; integrated dashboards with backend data pipelines for near real-time insights and reporting.
- **SFI Data (Green Bonds)** — Developed backend using Django REST APIs for data management and client reporting on sustainable finance metrics; implemented validation and reporting endpoints.
- **Inventory Management App (A1 Chips)** — Built Flutter mobile app for stock and inventory management; integrated with backend APIs for real-time inventory sync and reporting.
- **AI Background Removal** — Developed a real-time computer vision pipeline for media processing and background removal.
- **EEG-Based Drowsiness Detection** — Designed ML solution using fuzzy logic and XGBoost to detect driver drowsiness from EEG signals.
- **Petrol Pump Sales Prediction** — Implemented ARIMA forecasting model for demand prediction and trend analysis.
- **Emotion-Based Image Reconstruction** — Researched and built ML pipeline to reconstruct images from EEG-derived features.

Key Skills

- **Programming & Backend:** Python, Django REST Framework, REST APIs, Flask (familiar), Flutter (mobile integration)
- **Data & ML:** SQL / MySQL, Data Engineering fundamentals, Pandas, NumPy, Machine Learning, Computer Vision
- **Data Visualization & Dashboards:** Apache Superset, dashboard design, KPI modelling, integration with backend data pipelines
- **Tools & Approach:** Vibe Coding (AI-Assisted Development), Git, Cloud (AWS / GCP — familiar), ETL (familiar), collaboration & problem solving

---

Certifications

- GenAI Bootcamp — Innomatics Research Labs
- Data Science Internship (AI & CV) — Brigita
- Introduction to Data Science — Cisco
